

Key Insights from the Netflix Movies & Shows Dashboard:

The Netflix Movies & TV Shows dashboard provides a comprehensive overview of Netflix's content distribution from 2008 to 2020. It visually breaks down key metrics such as the total number of movies and TV shows added by year, top genres, ratings distribution, and country-wise contributions to Netflix's content library. The dashboard also highlights significant insights like the dominance of movies over TV shows, the rise of mature audience-rated content (TV-MA), and popular genres like documentaries and stand-up comedy. This report serves as a valuable tool for understanding Netflix's content strategy and audience preferences over the years.

This report is categorized into valuable sections as observed and shown;

1. Movies Dominate the Content:

The majority of content on Netflix between 2008 and 2020 is made up of movies, with 68.42% being movies and only 31.58% being TV shows. This indicates that movies have a larger presence on the platform.

2. Growth Over Time:

The number of movies and TV shows increased significantly from 2015 to 2020. Before 2015, the numbers were relatively low, but from 2016 onwards, both types of content saw an exponential rise, suggesting Netflix's push for more content during these years.

3. Top Genres

The most popular genres are Documentaries and Stand-Up Comedy, with Documentaries leading (299 shows). Dramas and comedies are also prevalent, showcasing Netflix's focus on diverse entertainment options.

4. High Concentration of TV-MA Rated Content:

TV-MA (Mature Audience) is the most common rating for Netflix shows and movies, with over 2,000 titles. This suggests that a significant portion of Netflix's content is targeted at adult audiences.

5. Country-Wise Distribution:

The United States dominates the platform in terms of content production, followed by India, the United Kingdom, and other countries, indicating that Netflix has a global reach but is heavily reliant on content from the US.

6. Popular by Genre and Country:

While the US contributes the most content, other countries like India and the UK also have substantial amounts of content on the platform, especially in dramas and comedies.

Recommendations:

1. Increase Focus on TV Shows:

Given that movies dominate, Netflix could benefit from increasing investment in original TV shows to balance content offerings and attract a larger series-watching audience.

2. Expand Regional Content:

Since the platform has a global reach but content is concentrated in a few countries, increasing investments in local content from underrepresented regions (e.g., Africa, Southeast Asia) can attract a broader audience.

3. Diversify Content Ratings:

Since a large portion of the content is rated TV-MA, diversifying into more family-friendly or youth-targeted content (TV-Y7, TV-G) could help tap into untapped demographics.

4. Leverage Documentary Popularity

With Documentaries being a top genre, Netflix should continue expanding this genre, possibly collaborating with more documentary filmmakers and creating original investigative or informative series.

These insights and recommendations aim to enhance Netflix's content strategy, optimize viewer engagement, and explore new growth avenues for the company.
